CAROLINE HERSCHEL,
with Portrait, 1 vol. 12mo, \$1.75.
MEMOIR AND CORRESPONDENCE OF CAROLINE HERSCHEL,
BY MRS. JOHN HERSCHEL.

"This charming life. It is, in fact, almost an autobiography. What a wonderful old and young woman she appears to have been, and how marvelously she was devoted to her brother. We think that Mrs. John Herschel has done well to hand down the life of her distinguished ancestor."—(Popular Science Review.)

"This is a pleasant book. Comparatively few in this generation know anything about Caroline Herschel; but she was well known in the last century to a few men of science. She was herself distinguished as the faithful and loving assistant of her brother in helping and forwarding his labors."—(Athenaeum.)

"A book full of interest for those whose scientific tastes and leanings will awaken in them a ready sympathy with the difficulties, the labors, and the triumphs of those with whose domestic habits and inner life they are thus brought into familiar contact."—(Nature.)

"The life of Mary Somerville was of remarkable interest, this sister-biography, if one may use such an expression, is by no means its inferior, being a singular record of obstacles overcome by perseverance and the most determined and unequalled self-devotion, distinguished also by a quaintness all its own, and rendered extremely entertaining by its picturesque sketches of home and foreign life and manners; while, as an unconscious character-portrait, the autobiographical portion is in itself a charming study."—(Speculator.)

THE PROGRESS OF SCIENCE.

Now ready, 1 vol. 12mo, with 60 Illustrations, \$2.
A SHORT HISTORY OF NATURAL SCIENCE, AND THE PROGRESS OF DISCOVERY FROM THE TIME OF THE GREEKS TO THE PRESENT DAY, FOR SCHOOLS AND YOUNG PERSONS. By Arabella B. Buckley.

"A book worthy of being ranked with Whewell's 'History of the Inductive Sciences,' it is one which should be first placed in the hands of every one who proposes to become a student of Natural Science, and it would be well if it were adopted as a standard volume in all our schools."—(Popular Science Review.)

"The design of this book is to trace the history of the gradual unfolding of the world of Nature, age after age, to human intelligence; and at the same time to tell the inspiring story of the patience, honesty, and devotion through which the noble army of scientific heroes have won from Nature those discoveries of her processes and laws which we possess to-day. The book will be a valuable aid in the study of natural science."—Journal of Education.
